

Baptist Medical Center South
Strategic Issue: Community Health Needs Assessment and Implementation
Plans 2016 - 2018

Issue:

Report of Years 1 and 2 results of Community Health Needs Assessment Implementation Plans

Background:

The Affordable Care Act requires that nonprofit hospitals conduct a community health needs assessment and develop implementation plans to address the needs prioritized every three years. The most recent needs assessment was conducted in 2015. The ACA requires that the boards of nonprofit hospitals approve the assessment and implementation plans.

A work group of Baptist South clinicians and administrators reviewed the needs identified in the assessment and prioritized the needs listed below. Implementation plans were developed in consultation with community organizations to address the prioritized health needs and approved by the Baptist Medical Center South Board January 18, 2016.

2016-2018 Prioritized Needs and Implementation Plans:

Cancer: Leverage Baptist MD Anderson partnership to increase screenings and education about prevention activities including HPV vaccine and smoking cessation. Register women for mammograms offered through the Florida Department of Health.

Communicable Diseases: Partner with school systems and local universities and colleges to increase knowledge of STIs and prevention activities. Partner with local agencies to increase awareness of existing HIV and STI testing and treatment in the community.

Diabetes: Increase community education of diabetes and the importance of a healthy lifestyle. Increase programming for healthy eating and physical activity through faith and community partners. Leverage Baptist Health's partnership with the YMCA to increase access to screening and health activities.

Mental Health: Partner with United Way and other community organizations to reduce stigma associated with mental illness. Offer training on the warning signs of mental illness and what to do to help youth and adults in the community through faith and community partners. Increase access to services through integrated care clinic collaboration.

Questions for Board Discussion:

As we begin data collection on the next needs assessment, are there any particular populations we should make sure are included in focus groups?

Are there any particular health needs we should make sure are included in the research for the next health needs assessment?
